

**Amendments to the Abstract**

Please **add** the following Abstract to this application.

-- A multi-format camera head comprises a light-sensor array (~~1~~) having light-sensitive elements (~~211, 212, ..., 221, 222, ...~~) arranged in a plurality of element lines (~~21, 22, ...~~), and element readout means (~~4, 9~~) connected to said light-sensor array (~~1~~) for outputting a signal representative of a quantity of light received by elements of a number of contiguous element lines. The readout means (~~4, 9~~) is adapted to selectively set the number of element lines to  $5 \bullet n$  or  $6 \bullet n$ ,  $n$  being an integer. --
